Guess it is color wheel open Ch 10 - User manual says that DMX 10-19 is shutter close 1 and DMX 20-29 is shutter close 2, but does not say what the difference is between the two Ch 10 DMX 100-250 - User manual says this range is shutter close, but it is the largest range in the channel so guess it might actually do something useful - strobe random maybe?

Lamp Controls	Fixture Display 0, Fixture Display 50, Fixture Display 100, Fixture Global Reset, Fixture Wakeup, Lamp On, Lamp Off, Fixture Shutdown
User Notes	Ch 10 - When a lamp boost function is used, the shutter must be opened or closed, or channel 14 must be moved outside before a lamp boost can be used again.
Known Issues	Ch 10 - User manual does not state which end of strobe ranges is fast and which is slow. Ch 10 - This channel had the same DMX spec as Studio Command 1200, but rev 4.2 of the joint user manual changed this channel of the Command 1200 but did not change the 700. This may just be a typo so if this personality does not work correctly try the personality for the 1200 instead. Ch 10, 14 - These two channels are fairly complex and interrelated. May not be absolutely correct for strobe mode and dim mode.

User Notes	Personality for fixture fitted with Color Mixing module (CM) in slot 1, a dual Rotating Gobo module (RG) in slot 2 and a rotating gobo and iris module (IR) in slot 3. When a Gobo is in Index mode and its gobo wheel rotates, the gobos on that wheel will also rotate.
Known Issues	Many deviations from manual. Personality does not have an MSpeed channel. Some moves took a long time, others were immediate. Could not work out how to determine when. When select random mode on gobo or effects wheels it carries on in current mode until DMX of the speed channel changes. Ch 5 - No dimmer or strobe mode defined in user manual for DMX 160 - 223. Ch 6 - when ch 5 is 64-95, lightning ends on white. Ch 8 - Does not strobe between 0 and 100 percent diffusion but between approximately 80 and 100 percent. Ch 11 DMX 10-19 - User manual states this disables MSpeed, but MSpeed is not used in this mode. Believe does nothing.

Channels	1:Macros, 2:Global MSpeed
User Notes	Set option switch to 4 for this personality Green LED marked "Electronics" will flash in groups of 4 when scroller is in this mode (whether the fan is enabled or not). Set left hand rotary dip switch under front cover to position 0 for this personality (switch the fan off). Patch the 2 channel patchgroup to the 11th and 12th channel of the appropriate group for this fixture to work correctly. See user manual for further information Ch 1 DMX 255 - Bump next step function causes scroller to bump to next step of a fade. It only works for fades, not for chases or fixed colors.
Known Issues	Ch 2 - MSpeed channel is actually stepped in 1% intervals, not continuous as written. Each 1% interval represents 0.1 sec so have treated it as a continuous feature.
